

Button

These are buttons that I made in photoshop. These buttons are difficult to make. You must take precautions before you make one for your website. There are many steps to take to make one of these. There is too much gradient and changing it out to make it look like a shadow. You can do many things after you have completed one. If you have front page you are able to do many effects with a button, like you can make it roll over. The first way to do it is by going to frontpage and inserting the picture and changing it into a rollover and you get the code. Or you can get the code and paste the document in there.

```
</td><td
width="478">
```

This is the code you can use to make the roll over button. You must upload the image to another site before you can use the code.
