MY MAZE GIF

My GIF it a simple maze that I found in Photoshop. All the objects that I used, I look them from Photoshop. It is not that hard to create because all the steps are very simple. The easiest way to make it is to make all the steps in Photoshop at least that is what I did.

STEPS; I first opened a new page in Photoshop and made the background black, by going to edit then fill. There I pick black and it changed. Then I picked the pencil tool that is in the toolbar in the right side, which opens a new toolbar at the top. After that I picked the maze on the small box next to shape tool. There I also picked the other shapes like the crown, grass and the ying-yang symbol. For every symbol I opened a new layer so it can be easy for my, in image ready. After I made the rabbit I used a toolbar that is located in the bottom of the layer tools. It adds a layer style to the objects that I created, it give stock, color and other thing that u would like to do. After I finished the decorations I made new layer of every movement that the rabbit will make, this made my work in image ready much easier. After I finished with all the movement then I went to image ready. In image ready I opened my animation toolbar and started put the layers in order from the maze with only the objects that the rabbit will get, with his movement throughout the maze. Since I had all the movements done in Photoshop it was pretty easy to finish it. That is how I created my GIF.
